This series redefines safety at manufacturing sites

Manufacturers now need to manage
globalization and flexible production.
That's why we have
developed our F3SG-SR/PG Series.
This series offers a complete lineup
of light curtains that comply
with global safety standards
and a wide range of functionality
that covers all aspects
from design through to maintenance.
The F3SG-SR/PG Series
helps manufacturers build safety systems.

Easy line layout changes

Simply replace a light curtain using the same accessories because the F3SG-SR Series and F3SG-PG Series share the same housing. There is no need to select and install optional accessories for a new light curtain.

Example : In order to install the light curtain closer to the machine, the perimeter guarding model is replaced with the hand protection model.

Flexible installation

Perfect fit

Protective heights are available in increments of 40 mm up to 1,000 mm*. The perfect protective height for any protected area ensures safety without the need for additional measures.
Problem

The light curtain that does not completely fit the protected area requires additional measures (e.g., adding a protection cover).

F3SG-SR*

The flexible height model requires no additional measures.

* F3SG-SR Finger and Hand Protection models only.

Protection without dead space

The F3SG-SR Series eliminates dead space that previously existed even when light curtains are series-connected or U-shape connected. Safer systems can be designed.

Problem

Dead space exists at the joint.

F3SG-SR*

Eliminates dead space and ensures safety.

F3SG-SR Hand Protection model (25-mm dia.)

Detects a hand anywhere
* Except for F3SG-SR Finger Protection models.

Simple wiring for flexible design

The F3SG-PG-C Perimeter Guarding Passive Mirror requires wiring of only the emitter/receiver. The use of an optional mirror column allows wiring at one location for protection around perimeters of equipment. They reduce wiring duct design and wiring time.

Robustness for operation in harsh environments

Specifications suitable for use in any environment contribute to stable operation.

Designed for reliable use in harsh environments where light curtains are prone to malfunction

Cold storage warehouse
Safety measures cannot be implemented because there is no light curtain that can be used in cold environments.
Metal working process
Oil that gets inside the light curtain causes failure at locations where oil mist is present.
Food processing line
Cleaning solution that gets inside the light curtain during machine wash-down causes failure.
Use in harsh environments
The spattered or dusty optical surface of the light curtain causes a malfunction or an unplanned machine stop.

Easy maintenance

Even inexperienced operators can easily check status and replace light curtains.

Easy error diagnosis with clear color indicators

The light curtain status can be checked at a glance.

Status indicator

Clear LED indicators with labels provide information about dirt detection for predictive maintenance and about LOCKOUT state for recommending replacement.

Colors and patterns indicate the status

Status indicator*	Color	Status
MAINT	Red/Illuminated	LOCKOUT state due to a recoverable error
	Red/Blinking	LOCKOUT state due to a replacement-recommended error
MAINT	Orange/Illuminated	Safety outputs are instantaneously turned OFF due to ambient light, vibration, or noise
	Orange/Blinking	The Intelligent Tap is in LOCKOUT state

* The M status indicator is used for the 14-mm detection capablity model.

For information on other indicators, refer to the F3SG-SR/PG Datasheet (Cat. No. F117) *Indicator* or *Troubleshooting*.

Lamp

Output status can be checked at a glance.
F39-SGLP

Output information can be assigned to the lamp as well as ABI.
Status, such as light intensity drop, can be checked from a distance.

Back up and restore settings with intelligent tap

Replacement and setting time during maintenance can be reduced to 1/10 or less*.

Manually loaded machining : PSDI

PSDI*, provided as standard,
reduces operator effort and increases productivity

There is no need for the operator to press a two-hand control switch, saving operating time and increasing operating efficiency.

Single break

The machine restarts when the light curtain is interrupted and reset once.

Example : Manual loading and automatic unloading press

Double break

The machine restarts when the interruption and reset are repeated twice.

Example : Manual loading and manual unloading press

* PSDI : Presence Sensing Device Initiation
Read the *User's Manual* (Cat. No. Z405) before using.
Note: Comply with laws and regulations in the countries where the machine operates.
Dangerous restart prevention : Pre-Reset

The Pre-Reset function
prevents possible accidents

This function prevents the restart of equipment while an unseen worker remains near the robot, ensuring operators' safety.

1 Press the pre-reset switch inside the hazardous zone.

2 Get out of the hazardous zone.

3 Press the reset switch outside the hazardous zone to restart the light curtain.

The equipment cannot be restarted until the pre-reset conditions are met and the light curtain is reset.
Change of detection capability: Reduced Resolution
Reduced Resolution changes the detection capability according to the specified number of interrupted beams

Even when objects (with a size of 1 to 3 beams) are present discontinuously, this function ignores them and keeps the safety outputs ON. This allows objects to move within the detection area or workers to interrupt some beams, helping maintain productivity.

Example : Arm and body protection

Safety output is kept ON even if worker's finger and an object interrupt 2 beams because they are allowed to enter.
When worker's arm or body, which interrupts 3 beams is detected, safety output is turned OFF.
Note : Ensure that the desired safety distance is maintained.
