

OMRON

KM20-A POWER TRANSDUCER

Instruction manual

Thank you for purchasing this OMRON product. Read this instruction manual and thoroughly familiarize yourself with the functions and characteristics of the product before using it. This product is designed for use by qualified personnel with knowledge of electrical systems. Keep this instruction manual for future reference.

Safety Precautions

Definition of Precautionary Information

CAUTION Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage.

Precautionary Information

CAUTION	There is a remote risk of injury through using this device. After thoroughly reading the instruction manuals, have wiring and installation performed by qualified personnel.	!
	If this device is wired incorrectly, there is a small possibility of failure, damage, or malfunction of internal parts.	!
	Tighten terminal screws to regulation torque (0.69-0.88N·m). If screws become loose, there is a small possibility of fire or malfunction.	!
	Do not insert pieces of metal or conducting wire into the device. There is a small possibility of electrical shock, fire or failure occurring.	⊘
	Do not touch terminals while power is being supplied. There is a small possibility of light injury through electrical shock.	⚡
	Do not attempt to disassemble, modify or repair the device. There is a small possibility of electrical shock or malfunction.	⚠

Precautions for Safety

The safety instructions below must be followed to ensure safety.

- Do not fix or wire in active line condition.
- Use the product within the noted supply voltage.
- Use input voltage and input current within the rated range.
- Use the product within the rated load.
- Do not use the product where toxic gasses (volatile, flammable, or corrosive gasses) exist.

Precautions for Safe Use

Regarding EN, UL/CSA standard-compliance
Although type KM20-A1 /-A2 power transducer conforms to EN61010-1/IEC61010-1 and UL/CSA as an equipment installed device, use it under the following conditions to maintain conformity to these standards.

- Output part of the type KM20 provides basic insulation only. In order to provide enhanced insulation (double insulation) required in EN61010-1/IEC61010-1 standard, provide basic insulation at the loaded side.
- Connect an IEC60127 conformed-compliant fuse (max. 1A), UL conformed-compliant fuse, or EN60947-2 conformed-compliant breaker.
- Use type KM20 CT050-CE or a strengthened insulated transformer (CT).
- The length of the cable for CT input and pulse output should be 30m or less.
- Fix the output lead line not to touch the exposed SELV. (Refer to IEC60364 or NEC class 2 for SELV.)
- Use the product with the terminal cover attached.

To use the product correctly

- Do not use the product in the following locations.
 - Locations subject to direct radiant heat from heating equipment.
 - Locations where the product may come into contact with water or oil.
 - Locations where dust or corrosive gasses (in particular, sulfuric or ammonia gas) are present.
 - Locations subject to extreme change in temperature and humidity.
 - Locations subject to vibrations or physical shocks.
 - Locations subject to a strong electric or magnetic field.
 - Locations subject to direct sunlight.
 - Locations where icing or condensation may occur.
 - Locations with large amounts of dust.
 - Locations subject to salt-water or water splash.
 - Locations where volatile, flammable, corrosive, or any other poisonous gas.
- As this product is not certified as a specified measuring instrument by measurement law, it cannot be used for proof of electric energy levels.
- Turn off the power to set the CT rate and pulse output unit.
- Do not use thinner or similar solvent for cleaning. Use commercial alcohol.
- When discarding, properly dispose of the product as industrial waste.

Installation

- Use the specified size of crimp terminals (M3.5) for wiring.
- Provide sufficient space around the product for heat dissipation. (Not doing so will shorten product life.)
- Install the product horizontally.

Noise Countermeasures

 - Do not install the product near devices generating strong high-frequency waves or surges.
 - When using a noise filter, check the voltage and current and install it as close to the product as possible.
 - In order to prevent inductive noise, wire the lines connected to the product separately from power lines carrying high voltages or currents. Do not wire in parallel with or on the same cable as power lines. Other measures for reducing noise include running lines along separate ducts and using shield lines.

Input specifications and available models

Rated input (Phase & wire system)	Current transformer (CT)	Model	Full scale watts
200 to 240 VAC (Single-phase two-wire system)	Special Dedicated CT (KM20-CT050, KM20-CT050-CE)	KM20-A11	20 kW
200 to 240 VAC (Three-phase three-wire system)	Commercially available CT of 1A secondary current*	KM20-A12	400 W
100 to 120 VAC (Single-phase two-wire system)	Special Dedicated CT (KM20-CT050, KM20-CT050-CE)	KM20-A21	10 kW
200 to 240 VAC (Single-phase three-wire system)	Commercially available CT of 1A secondary current*	KM20-A22	200 W
100 to 120 VAC (Three-phase three-wire system)			

* Clamp-type distributed current transformers KM20-CT100 (100A), KM20-CT250 (250A), and KM20-CT500 (500A), and distributed current transformer TP700-CT1200 (200A) are available.

Specifications

Rated frequency	50/60Hz
Rated input current	KM20-A11 A21 : KM20-CT050, KM20-CT050-CE KM20-A12 A22 : 1A
Measurement range	Voltage: 85% to 110% of rated input voltage Current: 120% of rated input current (continuous) 1,000% of rated input current (3 s)
Power supply	Self-powered supply from the measuring voltage input. Use voltage input P1 and P2.
Rated load	Voltage input: 0.5 VA max (P2-P3) Current input: 0.5 VA max (1S-1L, 3S-3L) Power input: 5 VA max (P1-P2)
Pulse output	Number of outputs: 1 (open collector) Rating: 30 VDC at 30 mA max. Residual voltage in ON status: 1.2 V max Maximum leak current in OFF status: 100 μA max
Operating temperature	-10 to 55
Ambient operating humidity	25 to 85%RH
Ambient atmosphere	No volatile, flammable, corrosive, or other poisonous gas
Ambient storage temperature	-25 to 65

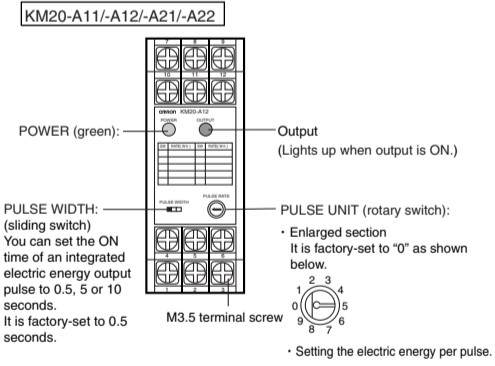

Performance

Accuracy	±2.5% of full scale (Ambient temperature: 25 ±5)
Insulation resistance	Between current & voltage input and output: 20M min (at 500 VDC) Between electric circuit and case: 20M min (at 500 VDC)
Dielectric withstand voltage	Between current & voltage input and output: 1,500 VAC for 1 min. Between electric circuit and case: 1,500 VAC for 1 min.
Effect of temperature	±1% of full scale with reference to output at 25 and rated power input (Ambient temperature: -10 to 20 , 30 to 55)
Effect of frequency	±1% of full scale with reference to output at rated frequency and rated power input (Rated frequency ±5%)
Noise immunity	±1,500 V on input voltage terminals in normal or common mode ±1 μs, 100ns for square-wave noise with 1ns.
Vibration resistance	10 to 150 Hz, 15 m/s ² , 0.1 mm for 10 times for 8 min each in X, Y, and Z directions.
Shock resistance	150 m/s ² for 3 times each in X, Y, and Z directions.
Applicable standards	UL508, CSA C22.2 No.14-95 EN61010-1/IEC61010-1 "pollution degree 2, overvoltage category II EN61326+A1 "CLASS A"

This unit has a function that does not convert electrical power of less than a constant input, to prevent conversion below a certain level of accuracy.

- KM20-A11/-A21:
less than approx. 1.07A (actual value) of exclusive CT input (Depending on the properties of the exclusive CT.)
- KM20-A12/-A22:
less than 0.018A (actual value) of an input to the product

Nomenclature

KM20-A11/-A21
Set the upstream electric energy as the output pulse unit. (Unit: Wh)

Set value	0	1	2	3	4	5	6	7	8	9
KM20-A11	5	10	50	100	500	1k	5k	10k	50k	100k
KM20-A21	1	5	10	50	100	500	1k	5k	10k	50k

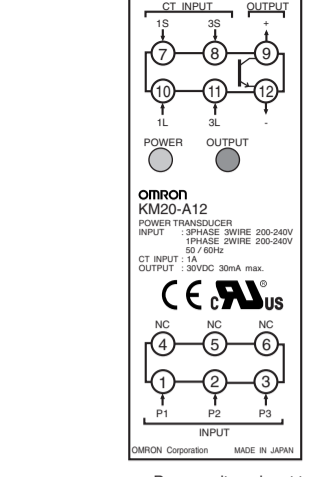

KM20-A12/-A22
(Unit: Wh)

Set value	0	1	2	3	4	5	6	7	8	9
KM20-A12	0.1	0.5	1	5	10	50	100	500	1k	5k
KM20-A22	0.05	0.1	0.5	1	5	10	50	100	500	1k

Dimensions (Unit: mm)

Terminal configuration

- ~ : Power voltage input terminal combine with an electric power supply input
- ~ : NC (Outage terminal)
- ~ : Input terminal1 for CT
- ~ : Input terminal3 for CT
- ⊕ : Output terminal

Connection example

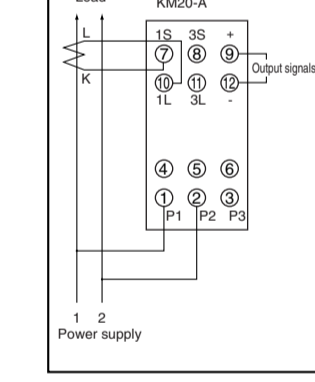

KM20-A1 / -A2

Single-phase three-wire system

Single-phase two-wire system

- Note 1: Type KM20-CT050 (exclusive CT) and type KM20-CT050-CE have polarity on the exclusive CT and output lead line. Also, commercial CT has polarity on CT and output. Set and wire the product not to confuse the polarity of K and L.
- Note 2: The colors of the lead line of the exclusive CT are; K = white, L = black.
- Note 3: The voltage indication light blinks when CT is not set or wired correctly.

High voltage input

Connect the Voltage Transformer (VT) when input power voltage will exceed 240V. In addition, use a Voltage Transformer with a capacity more than 5VA.

Settings

KM20-A11/-A21
(1) How to calculate the output pulse unit
Set the upstream electric energy as the output pulse unit since an exclusive CT is being used.

Example
Set the rotary switch to "5" (1kWh) to output a pulse every 1kW with type KM20-A11.

(2) How to calculate output pulse interval
Single-phase: Output pulse interval (seconds) = 3,600 seconds / [(input voltage × input current)/output pulse unit]
Three-phase: Output pulse interval (seconds) = 3,600 seconds / [(input voltage × input current × √3)/output pulse unit]

Example
In a single-phase three-wire system, if input power is 10kW and the output pulse unit is 50 Wh, 200 pulses (10kW/50Wh) are output per hour. Consequently, the output pulse interval is 3,600 seconds / (10kW/50Wh) = 18 seconds.

KM20-A12/-A22

(1) How to calculate the output pulse unit
Electric energy per pulse = output pulse unit of KM20 × CT ratio

Example
If a 100/1A (CT ratio = 100) current transformer is used for type KM20-A12 and the rotary switch is set to "4" (10Wh), the electric energy per pulse is 10 Wh × 100 = 1kWh.

(2) How to calculate output pulse interval
Single-phase: 3,600 seconds / [(input voltage × input current) / (output pulse unit × CT ratio)]
Three-phase: 3,600 seconds / [(input voltage × input current × √3) / (output pulse unit × CT ratio)]

Example
In a three-phase three-wire system, if the CT ratio is 100, input power (input voltage × input current × √3) is 10kW and the output pulse unit is 1 Wh, the output pulse interval is 3,600 seconds / [10kW / (1 × 100)] = 36 seconds.

Others

A 100ms OFF time is maintained when the pulse interval becomes shorter than the pulse width or the next output turns ON immediately after the output turns OFF.

The electric energy reaches the output pulse unit while the output pulse is ON.
The electric energy reaches the output pulse unit immediately after the output pulse turns OFF.

When the OFF time is too short, there is a possibility that it will not be measured correctly by connected equipment. It is advisable to use with a recommended pulse output unit.

Suitability for Use

OMRON shall not be responsible for conformity with any standards, codes, or regulations that apply to the combination of the products in the customer's application or use of the product. Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used.

Know and observe all prohibitions of use applicable to this product. NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

See also Product catalog for Warranty and Limitation of Liability.
